

Python Basics Assignment

Name: Fareha Asfar Ullah

Date: 13th June 2026

Part 1: Introduction to Python

1. What is Python?

Python is a high-level programming language, well-known for its simplicity and readability. It is good for beginners. Python has multiple uses like web development and AI development e.t.c.

2. Write two uses of Python.

Following are the uses of python:

1. Game development
2. Automation

3. Why is Python considered a beginner-friendly programming language?

Python is considered a beginner friendly language as it has simple syntax similar to English language which makes it easy to learn. It has various applications mentioned above allowing beginners to work on a wide range of projects easily.

Part 2: Print Statements

Write Python code for the following:

1. Print your name.
2. Print your age.
3. Print "I am learning Python!"
4. Print your favorite color.

Answer:

```
print("Fareha Asfar")
print("16")
print("I'm learning python")
print("turquoise")
```

Part 3: Concatenation

Use concatenation (+) to combine strings.

- 1.Join "Hello" and "World".
- 2.Join your first name and last name.
- 3.Create the sentence: "My favorite game is Roblox"

Answer:

```
print("Hello" + "World")
print("Fareha" + "Asfar")
print("My" + "favorite" + "game" + "isn't" + "Roblox")
```

Part 4: Data Types

Identify the data type of each value:

Value Data Type

"Python": String

25: Integer

3.14: Float

True: Boolean

"Roblox": String

Part 5: Practical Task

Create a Python program that prints:

- 1.Your name
- 2.Your favorite game
- 3.Your favorite food

Using variables and concatenation.

```
print("My name is " + name)
print("My favorite game is " + game)
```

Answer:

```
name="Fareha Asfar"
favorite_color="voilet"
favorite_food="burrito"
print("My name is " + name)
print("My favorite color is " + favorite_color)
print("My favorite food is " + favorite_food)
```

Bonus Challenge

Create variables for:

Name

Age

City

Print them in a complete sentence.

Answer:

```
name="Fareha Asfar"  
age=14  
city="Lahore"  
print("My name is",name,".I'm" ,age,".I live in", city)
```
